

What is Platelet Rich Plasma Therapy?

PRP therapy is an advanced treatment that is autologous; it utilizes your own blood. Blood contains components called Platelets which consist of growth factors.

These growth factors have the ability to activate and stimulate cellular regeneration within the body. When released, growth factors are able to ultimately encourage collagen production and the formation of new capillaries. PRP reins in on the body's natural healing abilities without the use of surgery or drugs. It provides:

- **Fast results, long-term benefits**
- **Natural, visible improvement**
- **Very few contraindications**

Who We Are

We provide the finest, most effective, least invasive care in a state-of-the-art environment. We reinforce our commitment by advancing our education and investing in innovative technology.

We attract and maintain patients who value and appreciate our expertise, and enthusiastically invest in and maintain their overall health. We accomplish our goals as an exceptionally motivated team with the highest standards of quality and integrity. Ultimately, we deliver a superior, "top notch" non-surgical experience.

What Conditions Can Regenerative Medicine Treat?

- Joint Pain
- Orthopedics
- Sports Injuries
- Ligament Sprains
- Muscles Strains
- Back Pain
- Aesthetics
- Hair Restoration
- Tendonitis
- Plantar Fasciitis

What is Stem Cell Regenerative Medicine?

Man has spent centuries looking for ways to help extend and increase the well-being of their lives for the present and future generations. With the advancement of regenerative medicine, the power of true healing is being revealed within our own bodies; our bodies were designed to heal themselves!

Regenerative medicine is often associated with stem cells therapy whose outcome is dependent on the age of the patient they are being recovered from. However, there is so much more to regenerative medicine than just stem cells. Equally important are components such as collagens, cytokines, proteins, growth factors... The list goes on and on. New Life Regenerative Medicine products, derived from birth tissues taken from carefully screened mothers at the time of cesarean section, offer components that are needed to enhance the body's ability to heal.

Research has shown that the use of human cell and tissue products from the umbilical cord and other birth tissues could potentially have a disruptive effect on the way certain injuries and conditions are managed. Our processor's team of research scientists and technicians have decades of experience with tissue processing and cell biology. Together, we are working tirelessly to convert the latest and greatest scientific discoveries into innovative products for regenerative medicine.

Hair Restoration

PRP has been used to help repair damage or injured tissues in the body. This minimally invasive procedure holds the ability to nourish and vitalize hair follicles for hair growth in both men and women by:

- **Making finer hair strands appear thicker**
- **Increasing density and strength of hair**
- **"Waking up" dormant follicles**
- **Deceleration hair loss**

Skin Rejuvenation

Platelet Rich Plasma therapy utilizes the incredible scientific breakthrough of regenerative medicine and skin care technology/therapy to treat:

- **Epidermal thinning and loss of volume in the face, neck and décolleté**
- **Circles, bags and discoloration around the eyes**
- **Active acne and acne scars**
- **Fine lines and wrinkles**
- **Vertical lip lines**
- **Nasolabial folds**
- **Stretch marks**
